THE RIGHT CHOICE FOR TILING kitchens & worktops

Recipe for success.

Ceramic tiles are ideal in kitchen areas, they are hygienic, easy to clean and durable and when it's the heart of the home you're refurbishing, don't take chances – use Dunlop, the name you can trust.

- Tiling onto emulsion paint/plaster/ plasterboard/cement:sand render walls

For dry areas and areas subject to splashing:

Dunlop Ceramic Wall Tile Adhesive and Dunlop Wall Grout or Dunlop Fix 'n' Grout

- Tiling onto existing ceramic wall tiles

Dunlop Waterproof Ceramic Wall Tile Adhesive and Dunlop Wall Grout or just use Dunlop Fix 'n' Grout

- Tiling onto laminated or chipboard worktops

Dunlop Waterproof Ceramic Wall Tile Adhesive and Dunlop Worktop & Shower Grout

DUNLOP

THE RIGHT CHOICE FOR TILING

Walls should be flat, clean, dry and in a firm, sound condition. Note that typical background surfaces, such as plaster or plasterboard are water sensitive. If the plaster has a dusty appearance wipe down with a damp cloth and prime with **Dunlop Universal Bonding Agent**. Emulsion painted walls should be deeply scored prior to tiling.

For walls, use **Dunlop Ceramic Wall Tile Adhesive**, a non-slip ready-mixed adhesive.

Any surface which may be in contact with food needs to be impervious, non-toxic, hygienic and easy to clean. On wooden surfaces and non-porous backgrounds use **Dunlop Waterproof Ceramic Wall Tile Adhesive**, together with **Dunlop Worktop & Shower Grout**.

Ceramic tiles are ideal for kitchen floors: hygienic, easy to clean and durable. They are the perfect permanent solution. Pick up our Floors leaflet for more information.

When tiling onto existing tiles, don't forget to allow three days before grouting.

After tiling remember to use **Dunlop Bath & Shower Silicone Sealant** in corners and in junctions with other backgrounds, for example between worktops and walls, around the sink etc, as shown by the yellow key.

CHECKLIST

- Tiles
- Bonding Agent
- Adhesive
- Grout
- Silicone Sealant
- Tile Trim
